SUMMARY

Software Engineering-focused full-stack developer and Computer Science student with hands-on experience building and scaling **production-grade web applications** serving **10,000+ users**. Strong background in **full-stack development**, **cloud infrastructure**, **REST APIs**, **distributed systems**, and **performance optimization** using React, Next.js, TypeScript, AWS, and Azure. Seeking a Software Engineering Internship to contribute to scalable, high-impact systems.

EDUCATION

Stony Brook University

Bachelor of Science in Computer Science

Stony Brook, NY

Aug 2023 – May 2027

Relevant Coursework: Systems Design, Principles of Database Systems, Software Development

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C, SQL, Java

Frontend: React, Next.js 14, Tailwind CSS, HTML/CSS

Backend: Node.js, RESTful APIs, Serverless, Microservices

Cloud: AWS (DynamoDB, S3, Lambda, CloudFront), Azure

AI/ML: NLP, Transformers (T5), PyTorch, TensorFlow

DevOps: Git, Docker, CI/CD, Vercel

PROFESSIONAL EXPERIENCE

Full-Stack Developer – Leet Lang (leetlang.com)

May 2025 – Present

IELTS Learning SaaS Platform / 10,000+ Active Users

New York, NY

- Designed, built, and deployed a **production SaaS platform** serving **10,000+ users** with **99.9% uptime** using React, Next.js, TypeScript, and cloud-native architecture.
- Developed scalable backend services and **RESTful APIs** using AWS DynamoDB (single-table design), S3, Lambda, and CloudFront, achieving **<50ms latency** and **500 req/sec** throughput.
- Trained and integrated an **800M-parameter T5 Transformer NLP model** for academic paraphrasing and automated feedback, improving writing quality and user engagement.
- Implemented **RBAC**, real-time collaboration, automated testing, CI/CD pipelines, and performance optimization for reliable global deployments.

IT Office Manager Assistant – Stony Brook University

May 2024 – MAY 2025

Information Technology Services

Stony Brook, NY

- Provided technical support while identifying recurring issues and improving internal tooling for operational efficiency.
- Built internal automation tools for ticket triage and staff scheduling, deployed across **45 campus offices**.
- Assisted with configuration, monitoring, and reliability improvements for university web services.

PROJECTS

Unix-like File System Implementation (C)

- Implemented a disk-backed Unix-style file system in C using i-nodes, data blocks, and bitmap-based allocation.
- Built core file system utilities (**ls**, **cd**, **pwd**, **tree**) supporting recursive traversal and robust error handling.

Multiplayer Poker Game Server (C, Sockets)

- Developed a concurrent Texas Hold'em server supporting multiple clients using sockets and multithreading.
- Designed communication protocols and ensured consistent game-state synchronization under concurrent access.
